Wednesday, April 26th, 2017

8:30am-4pm

Druids Hall, Nicasio, CA

Registration: \$25

Includes morning refreshments, lunch and a printed Horse Keeping reference guide

Online registration at:

<https://2017HorseWorkshop.eventbrite.com>

Join the Marin Horse Council and the Tomales Bay Watershed Council for an informative, educational and hands-on workshop to learn more about:

- The current requirements of the Confined Animal Facilities regulatory program by the San Francisco Regional Water Quality Control Board.
- How to implement Best Management Practices (BMPs) to protect the health and safety of your horses and the environment.
- How to manage rain, mud and manure.
- How to easily monitor water quality at your facility to inform management actions.
- What resources are available to you and your facility to implement BMPs and protect water quality.

Workshop includes a morning session in a classroom setting with presentations by regulators from the Regional Water Quality Control Board and experts in animal facility management practices with time for Q&A and discussion. After lunch (*provided with registration*), we will tour a local horse facility to experience field demonstrations of practical techniques to manage runoff, manure, pastures and monitor water quality.

Featured speakers include: Monte Kruger (Marin Horse Council); Jeff Creque (Carbon Cycle Institute); Laurie Taul (SF RWQCB); Maggie Sepulveda and Ariel DeLara (Natural Resources Conservation Service); David Lewis (UC Cooperative Extension); Rob Carson (MCSTOPPP and TBWC)

Workshop brought to you by these hosts, sponsors and supporters:
